

Microsoft Azure Cost Estimate

INFRASTRUCTURE BASELINE CONFIGURATION REPORT

Project Target:	Multi-Tier Production Web App	Deployment Date:	June 2026
Primary Region:	East US	Pricing Model:	Pay-as-You-Go / Baseline
Currency:	USD (\$)	Verification State:	Active & Verified

TOTAL MONTHLY SUBTOTAL	PROJECTED ANNUAL RUN-RATE
\$164.58	\$1,975.01

ITEMIZED COST BREAKDOWN

SERVICE COMPONENT	CONFIGURATION & SIZING DETAILS	MONTHLY COST
Virtual Machines Compute Layer	2x D2as v5 Instances (Linux) Specs: 2 vCPUs, 8 GiB RAM per instance Runtime: 1,460 total aggregate hours/month (24/7 continuous operational load)	\$117.24
OS Storage Local Block Storage	2x 32 GiB Standard SSDs (E4 Tier) Persistent non-volatile OS boot partitions attached directly to active compute instances	\$13.12
Blob Storage Object Storage	100 GB Capacity (General Purpose v2 framework) Access Tier: Hot Data Profile Redundancy: Locally Redundant Storage (LRS)	\$2.10
Storage Transactions API Operations	Structured transaction volume applied to object baseline storage: 10,000 Write (PUT/COPY/POST) operations 100,000 Read (GET/SELECT) operations	\$0.12
Bandwidth / Data Transfer Network Egress	500 GB Public Outbound Internet Egress - First 100 GB/month: Fully covered under standard free allocation tier (\$0.00) - Remaining 400 GB: Billed at standard regional unit rate (\$0.08 per GB)	\$32.00
GRAND TOTALS		\$164.58

ARCHITECTURAL PROPERTIES & COST CONTROLS

- **Dedicated Hardware Profiling:** The selected **D2as v5** instance class operates on AMD EPYC™ 3rd Generation hardware, delivering solid, steady-state CPU capacity. This avoids burstable credit depletion limits and prevents server degradation under continuous production stress.
- **Built-In Egress Optimization:** Azure natively includes **100 GB of free outbound internet data transfer** per month per subscription, lowering the networking overhead for this baseline profile from \$45.00 to \$32.00.
- **Parity Mapping Alignment:** Storage and transaction capacities are meticulously calibrated to guarantee full feature and operational parity with multi-cloud alternative architectures.
